EXTENSION DE STYLE TEXJAZZ-ASKREPLY

<u> Documentation — v.0.1g — 14 janvier 2021</u>

EJAZZ*

RÉSUMÉ

L'extension de style ETEX « askreply » a pour objet de gérer l'affichage des environnements d'exercices et de questionnaires à choix multiples — QCM — au sein d'un document, de même que leurs contreparties respectives : environnements de solutions et de réponses. Chaque environnement peut être enregistré pour reporter son affichage, disposer d'une base de données d'exercices et de quiz ou partager leur rédaction avec d'autres contributeurs. Par ailleurs, ce style a été conçu parallèlement à l'extension « assignpoints » qui, comme son nom l'indique, permet d'attribuer et de recouvrir des points associés aux exercices et aux questionnaires.

SOMMAIRE

- 1 Introduction et usage élémentaire
 - 1.1 Chargement de l'extension 2
 - 1.2 Composition d'un premier exercice/quiz 2
- 2 Attribution/récupération de points
 - 2.1 Numération et niveaux 4
 - 2.2 Recouvrement des points 6

1 Introduction et usage élémentaire

Cette extension La peut s'utiliser pour disposer d'une mise en forme des environnements d'exercices et de questionnaires à choix multiples — QCM ou quiz. Elle propose effectivement une conception graphique fondée sur le très puissant outil PGF/TikZ et le remarquable paquet « tcolorbox ».

Sa teneur ne s'arrête bien entendu pas là, car techniquement, le caractère novateur de cette extension est d'exploiter les possibilités du format PDF avec les couches *Optional Content Groups* (OCG), mais surtout *Optional Content Membership Dictionaries* (OCMD) désormais implémentées et accessibles pour LETEX. Ces fonctionnalités sont au fondement de l'interactivité des quiz (cf. §3.2).

Le style « askreply » peut se charger seul ou en conjonction avec l'extension « assignpoints » pour gérer la notation des exercices et des quiz. Dans cette hypothèse, « askreply » doit être chargée après « assignpoints ».

1.1 Chargement de l'extension

Pour charger l'extension, il suffit de saisir en préambule de document.

```
\usepackage{texjazz-askreply}
```

Si cela ne fonctionne pas car ce paquet n'est pas disponible dans votre distribution MEX, une copie du fichier « askreply.sty » est à placer dans le même répertoire que votre document. Pour une utilisation régulière, il est conseillé de l'installer dans votre arborescence locale, sous le répertoire \texmf par exemple, puis de rafraîchir les accès aux fichiers par les commandes texhash ou tlmgr.

Au risque d'insister, si l'extension « assignpoints » est également chargée, il faut impérativement le faire *avant* le style « askreply ».

```
\usepackage{texjazz-assignpoints}
\usepackage{texjazz-askreply}
```

Par ailleurs, il faut savoir que l'extension affiche par défaut les entêtes des différents environnements en anglais. Le style « askreply » propose les options de langues en français et en allemand (cf. §3.1):

```
\usepackage[french]{texjazz-askreply}% Français
\usepackage[german]{texjazz-askreply}% Allemand
```

Pour que les différentes références croisées (éléments OCMD) et couches graphiques (éléments PGF/TikZ) s'ajustent, il faut au moins quatre compilations successives (respectivement deux par famille d'éléments).

1.2 Composition d'un premier exercice/quiz

Afin d'illustrer le propos, nous pouvons nous engager dans la composition d'un premier exercice élémentaire.

```
\begin{exercise}[title=Addition simple]
Que donne 1+1 ? % Exercice avec solution associée
\end{exercise}
```

0

EXERCICE 1 — ADDITION SIMPLE

Que donne 1 + 1?

Solution page 4

\begin{exercise}[$\langle key\text{-}value\ options \rangle$]

On constate que la mise en forme est sobre et élégante.^a Le numéro de l'exercice et, le cas échéant, la page où se trouve la solution sont indiqués. Par ailleurs, un titre optionnel peut être introduit pour mentionner le thème de l'exercice. Enfin, un pictogramme affiche en marge le type d'environnement dont il s'agit. Ce visuel peut être ^b changé, mais par défaut, il sous-tend un exercice de codage à réaliser avec un ordinateur. Le détail des options possibles est exposé en §3.4 en page 12.

\begin{exercise}[symbol=\faPenFancy, title=Addition simple]
 Que donne 1+1 ? % Changement de symbole d'appel d'exercice
\end{exercise}

EXERCICE 2 — ADDITION SIMPLE

Que donne 1+1?

\begin{quiz}[$\langle key\text{-}value\ options \rangle$]

Les environnements de quiz sont tout aussi dépouillés et sont également affublés d'un numéro, d'un titre optionnel et d'un pictogramme modifiable qui, par défaut, symbolise une liste — sous-entendu de questions.

\begin{quiz}[title=Formats de couleur]
Quelles composantes de couleur forment une image RGB ? (Plusieurs choix)
\end{quiz}

QUESTIONNAIRE 1 — FORMATS DE COULEUR

Quelles composantes de couleur forment une image RGB? (Plusieurs choix)

\begin{solution}[$\langle key\text{-}value\ options \rangle$]

Comme pendant direct des environnements d'exercice sont offerts des environnements de solution, là encore avec leur signalétique consacrée : pictogramme associé et rappel du titre et de la page de l'énoncé d'exercice.

a. Néanmoins, rien d'exceptionnel en utilisant l'extension « tcolorbox ».

b. La police de caractères « fontawesome » de l'extension éponyme est ici utilisée.

Dans une utilisation élémentaire, l'environnement de solution n'emploie pas d'option particulière : le titre et le numéro d'exercice auxquels se réfère la solution sont automatiquement détectés. En revanche, dans une configuration plus avancée, les solutions peuvent être ajustées plus précisément (cf. §3.1 et 3.4).

```
\begin{solution}
Après réflexion intense, il semble que $1+1=2$
\end{solution}
```

SOLUTION 1 — ADDITION SIMPLE (PAGE 3)

Après réflexion intense, il semble que 1 + 1 = 2

Au cas ou plusieurs énoncés d'exercice se succèdent sans que certains d'entre eux n'aient de solution, il faut explicitement saisir l'identifiant de l'exercice à partir duquel on recommence la comptabilisation des solutions. Et ainsi de suite si les solutions sont fragmentés au sein du document considéré. Le détail du mécanisme est exposé dans la documentation du paquet « assignpoints » et au §3.1.

2 Attribution et récupération de points

Cette section se propose de conduire un rapide rappel des commandes de comptabilisation de point(s). Renvoi est fait à la documentation de l'extension de style « assignpoints » pour un descriptif plus avancé.

2.1 Numération et niveaux des environnements

\points $\{\langle points-number \rangle\}$

La commande d'attribution des points de notation est $\{points-number\}$. En y faisant appel plusieurs fois dans un même environnement, les points s'additionnent. Considérons alors le code qui suit.

```
\begin{exercise}[title=Équation simple, level=basic]
Déterminer un nombre $x$ tel que $3 \cdot x = 15$\points{0.5} et
    expliquer
la démarche adoptée qui a permis d'obtenir ce résultat.\points{1.5}
\end{exercise}
```

Il apporte la composition subséquente.

EXERCICE 3 — ÉQUATION SIMPLE

2 points

Déterminer un nombre x tel que $3 \cdot x = 15$ et expliquer la démarche qui a permis d'obtenir ce résultat.

Le total des points de l'exercice s'affiche à droite de l'entête. On remarque que si cette somme de points est un entier, la partie décimale « <int>.0 » est tronquée. En outre, en marge de droite de l'entête, une signalétique de trois petits voyants indiquent le niveau du public auquel s'adresse l'exercice : basique, intermédiaire ou avancé. Ces niveaux sont contrôlés par l'option level=basic/intermediate/advanced.

\itempoints{\langle points-number\rangle}

La commande **\itempoints**{\langle points-number \rangle} est « silencieuse », dans le sens ou elle ne s'affiche pas directement. Dans le cas ou l'accumulation de points est structurée en liste explicite (environnements itemize ou enumerate), il est parfois pratique, audelà de la comptabilisation, d'indiquer directement les points associés aux items. C'est réalisable par le biais de la commande **\itempoints**{\langle points-number \rangle}.

```
\begin{exercise}[title=Équation simple, level=basic]
Résoudre les problèmes suivants.
\begin{enumerate}
   \item Déterminer un nombre
        $x$ tel que $3 \cdot x = 15$. \itempoints{0.5}
   \item Expliquer la démarche adoptée
        pour obtenir ce résultat. \itempoints{1.5}
   \end{enumerate}
\end{exercise}
```

EXERCICE 4 — ÉQUATION SIMPLE 2 points Résoudre les problèmes suivants. 1. Déterminer un nombre x tel que 3 · x = 15. 2. Expliquer la démarche adoptée pour obtenir ce résultat. (1,5)

\itempoints*{\langle points-number\rangle}

Une même approche s'applique aux quiz. Admettons la saisie de code à venir.

QUESTIONNAIRE 2 — FORMATS DE COULEUR Répondre aux questions. Plusieurs assertions possibles. • Quelles composantes de couleur forment une image RGB? (1 point)

En dehors de l'esthétique cousine, on remarque que l'emploi de la version étoilée de la macro **\itempoints***{\langle points-number \rangle} permet de rajouter au nombre de point(s) une « unité » de comptabilisation, c.-à-d. « point » et « points » pour respectivement le singulier et le pluriel.

2.2 Recouvrement et synthèse des points

La rédaction des exercices (respectivement des quiz) étant effectuée et l'attribution de points accomplie, les commandes de recouvrement et d'affichage des points peuvent être présentées. Encore une fois, les détails sont disponibles en consultant la documentation de l'extension **assignpoints**; nous nous contentons ici d'en faire une synthèse, versions simples comme étoilées qui rajoutent l'unité de point(s) au nombre à afficher.

```
\label{lem:continuous} $$ \operatorname{exercise-number} $$ \operatorname{exercise} {\langle exercise-number \rangle} $$ \operatorname{exercise} {\langle quiz-number \rangle} $$
```

\numberofexercises
\exercisetotalpoints
\exercisetotalpoints*

 $\gen{array}{ll} \gen{array}{ll} \gen{array}{$

\getpoints* $\{\langle ex-nb\rangle\}$

\getpoints[exercise] $\{\langle ex-nb\rangle\}$ \getpoints*[exercise] $\{\langle ex-nb\rangle\}$

\numberofquizzes
\quiztotalpoints
\quiztotalpoints*

\getpoints[quiz]{ $\langle qz - nb \rangle$ } \getpoints*[quiz]{ $\langle qz - nb \rangle$ }

- numberofexercises donne le nombre d'exercices dans tout le document;
- \exercisetotalpoints et \exercisetotalpoints* apportent directement la somme de tous les points sur l'ensemble des exercices;
- \getpoints $\{\langle i \rangle\}$ et \getpoints* $\{\langle i \rangle\}$ ou \getpoints<*>[exercise] $\{\langle i \rangle\}$ conduisent au total des points du « $i^{ième}$ » exercice numéroté.
- \numberofquizzes retourne le nombre de questionnaires du document;
- \quiztotalpoints et \quiztotalpoints* récupèrent la somme des points sur l'ensemble des questionnaires du document;
- à l'instar des exercices, \getpoints[quiz]{ $\langle i \rangle$ } et \getpoints*[quiz]{ $\langle i \rangle$ } fournissent le total des points du « $i^{ième}$ » questionnaire.

À noter que l'information nécessaire à ces macros est retrouvée à partir des valeurs enregistrées dans le fichier auxiliaire (extension « .aux ») lors de la première compilation LETEX. Pour obtenir une notation correctes, il faut sur ces aspects compiler ce le document au moins une seconde fois.

À titre d'illustration, on donne le code ci-dessous.

```
L'exercice 4 a \getpoints{4} points, il y a \numberofexercises\
exercices avec un total de \exercisetotalpoints*\.
En contrepartie, le questionnaire 2 a à son actif
\getpoints*[quiz]{2} et il y a \numberofquizzes\ questionnaires
pour un total de \quiztotalpoints\ points.
```

Après compilation cela produit la phrase suivante : « L'exercise 4 a 2 points, il y a 5 exercices avec un total de 11 points. En contrepartie, le questionnaire 2 a à son actif 3 points et il y a 3 questionnaires pour un total de 5,5 points ».

c. Une compilation à l'issue de laquelle des points d'interrogation s'affichent en italique —?? — signifie qu'il faut la réitérer. En revanche, un affichage en caractères gras —?? — indique une erreur de recouvrement dans les valeurs de points.

3 Ajustements et options

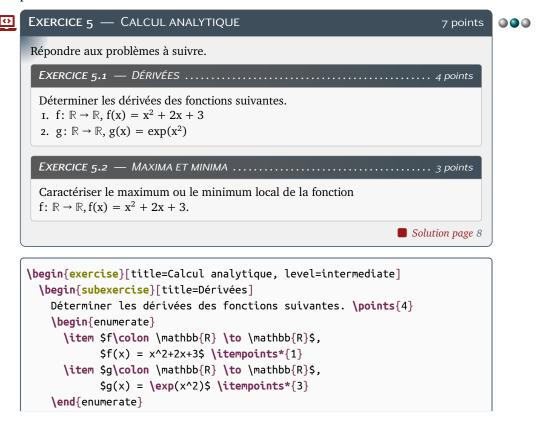

3.1 Structuration des exercices

À l'occasion, si un exercice (resp. un questionnaire) amène à se présenter avec des sous-parties (par exemple, un sujet général décomposé en plusieurs domaines spécifiques), l'extension « assignpoints » offre la possibilité de segmenter la formusubexercise lation d'un énoncé en sous-exercices (subexercise) et en questions (quizquestion) pour structurer le document. Comme parallèle aux sous-exercices, l'extension offre subsolution des environnements de sous-solutions (subsolution).

```
\begin{subexercise}[\langle key-value options \rangle] \begin{quizquestion}[\langle key-value options \rangle] \begin{subsolution}[\langle key-value options \rangle]
```

Ainsi, ces environnements intriqués fonctionnent à l'identique de leurs homologues de rang supérieur, néanmoins ils ne peuvent uniquement s'utiliser qu'au sein de ceux-ci. Un « subexercise » est alors contenu dans un « exercise », une « quizquestion » inclue à un « quiz » et une « subsolution » dans une « solution ».

Ce qui suit résulte d'un exemple de structuration d'un exercice en deux sousparties bien distinctes.

```
\end{subexercise}
\begin{subexercise}[title=Maxima et minima]
  Caractériser le maximum ou le minimum local
  de la fonction \\
  $f\colon \mathbb{R} \to \mathbb{R}, f(x) = x^2+2x+3$. \points{3}
  \end{subexercise}
\end{exercise}
```

On vérifie alors qu'un « subexercise » est bien uniquement inclus au sein d'un exercice et qu'il n'est pas permis d'imbriquer des environnements « subexercise » entre eux. L'extension signale une erreur si tel n'est pas le cas.

Pour les environnements de « solution » et de « subsolution », on a la même correspondance qu'avec les exercices et les sous-exercices. Néanmoins, pour illustrer la comptabilisation des sous-solutions en rapport à l'exercice précédent, on doit explicitement saisir son numéro d'identification, ici 5. En effet, comme les exercices 2 à 4 n'ont pas de solution dans ce document, le comportement par défaut serait d'incrémenter d'une unité le numéro de solution, à savoir ici 2 (puisque le premier exercice possède une solution).

Qu'il s'agisse des solutions et sous-solutions, on peut noter que les titres et les points qui leurs sont attribués sont automatiquement recouvrés et affichés.

```
\begin{solution}[ID=5]
\begin{subsolution}
\begin{enumerate}
\item pour $f\colon \mathbb{R} \to \mathbb{R}$$, $f(x) = x^2+2x+3
\Rightarrow f^\prime(x) = 2x+2$
\item pour $g\colon \mathbb{R} \to \mathbb{R}$$, $g(x) = \exp(x^2)
\Rightarrow g^\prime(x) = 2x\cdot\exp(x^2)$
\end{enumerate}
\end{subsolution}
\begin{subsolution}
\begin{subsolution}
\undersigned fonction polynôme de degré 2, à savoir $p(x)=ax^2+bx+c$,
\undersigned admet un extremum pour $x=-b/a$. Donc, pour la fonction
\$f\colon \mathbb{R} \to \mathbb{R} \to \mathbb{R}$, f(x) = x^2+2x+3$, on a $x_e=-2$.
\end{subsolution}
\end{subsolution}
\end{solution}
\end{solution}
\end{solution}
\undersigned \undersigned admets \undersigned admet
```

```
SOLUTION 5.2 — MAXIMA ET MINIMA ...... 3 points
```

Une fonction polynôme de degré 2, à savoir $p(x) = ax^2 + bx + c$, admet un extremum pour x = -b/a. Donc, pour la fonction $f: \mathbb{R} \to \mathbb{R}$, $f(x) = x^2 + 2x + 3$, on a $x_e = -2$.

Questionnaires à choix multiples

Dans le principe, la même approche s'applique au tandem d'environnements « quiz » et « quizquestion ». Néanmoins, le caractère novateur de l'extension askreply par rapport à assignpoints est de proposer un nouvel environnement quizquestion fondé sur les fonctionnalités Optional Content Groups (OCG) et Optional Content Membership Dictionaries (OCMD) du format PDF. Cela permet une interactivité des quiz avec une interface proche de celles des Mooc (voir par exemple Fun-Mooc, France Université numérique). Pour une présentation plus complète des détails techniques, se référer au §3.4 et au code source. Ici est uniquement exposée l'interquizquestion face utilisateur.

quizquestion*

Les questionnaires à choix multiples sont, à l'instar des exercices, structurés en \mcqproposal questions possédant un titre optionnel et une numération de points. Ces questions sont elles-mêmes associées à des propositions de réponses via la macro \mcqproposal. La syntaxe générale est fournie par le code à suivre.

```
\begin{quiz}[title=<title>]
  \begin{quizquestion} < display>[pos] {correct} { wrong} %
                       {questiontitle}(dimx,dimy)<explanation>
  \mcqproposal{text-1}
  \mcqproposal{text-n}
  \end{quizquestion}
\end{quiz}
```

 $\begin{quizquestion} <\langle displ. \rangle = [\langle pos. \rangle] {\langle correct \rangle} {\langle wrong \rangle} {\langle opt. \ title \rangle} {\langle dimx, dimy \rangle} = \langle expl. \rangle = \langle dimx, dimy \rangle = \langle expl. \rangle$ Le détail des différents champs de l'environnement quizquestion s'appuie sur la logique à suivre pour les arguments obligatoires comme optionnels.

```
display mode = <margin|tooltip>
```

Par défaut : <margin>

Manière optionnelle d'afficher la réponse, en marge (par défaut), <marqin> ou en infobulle, <tooltip>.

```
position = [b|c|t]
```

Par défaut : [b]

Positionnement optionnel de l'encart de réponse : en bas (par défaut) [b] pour bottom, au centre [c] pour centered ou en haut [t] pour top.

```
correct answers = {\langle comma separated list of proposal numbers\rangle}
```

Numéros des propositions correctes (obligatoires), séparées par des virgules.

```
wrong answers = \{\langle comma \ separated \ list \ of \ proposal \ numbers \rangle\}
```

Numéros des propositions fausses (obligatoires), séparées par des virgules.

```
optional title = {\langle optional title \rangle } \tag{initialement vide}

Titre optionnel.

dimx,dimy = (dimx,dimy) Par défaut : (6pt,12pt)

Ajustement optionnel des coordonnées de l'affichage de la réponse (<tooltip>).

explanations = <text> Par défaut : <Sorry, no answer available>

Texte optionnel mais souhaitable d'explication.
```

En appliquant la syntaxe à un cas concret, on peut considérer le code donné ci-dessous qui illustre les options essentielles.

```
\begin{quiz}[title=Histoire de couleur]
  \begin{quizquestion}{1,3,4}{2,5,6}{Modèle RGB/RVB}
  <Le modèle « Rouge, Vert, Bleu » correspond au couleurs primaires d'une</pre>
    Quelles sont les composantes d'une image RGB/RVB ? \\
   Plusieurs assertions possibles. \points{1.5}
      \mcqproposal{Rouge}
      \mcqproposal{Jaune}
      \mcqproposal{Vert}
      \mcqproposal{Bleu}
      \mcqproposal{Cyan}
      \mcqproposal{Magenta}
  \end{quizquestion}
  \begin{quizquestion*}<tooltip>{4}{1,2,3,5}{Cheval de Henry IV}(4pt,24pt)
   Quelle est la couleur du cheval blanc de Henry IV ? \points{1}
      \mcqproposal{Noire}
      \mcqproposal{Jaune}
      \mcqproposal{Grise}
      \mcqproposal{Blanche}
      \mcqproposal{Brune}
  \end{quizquestion*}
\end{quiz}
```

QUESTIONNAIRE 3 — HISTOIRE DE COULEURS	2,5 points
QUESTIONNAIRE 3.1 — MODÈLE RGB/RVB	1,5 points
Plusieurs assertions possibles.	
☐ Jaune	
□ Vert	
□ Bleu	

☐ Magenta					
VÉRIFIER	AFFICHER LA RÉPONSE	RÉINITIALISER			
	RE 3.2 — CHEVAL DE HENRY IV	1 poir			
uelle est la c	ouleur du cheval blanc de Henry IV?				
O Noire					
O Jaune					
O Grise					
O Blanche					
O Blanche O Brune					

Automatiquement, la composition du questionnaire s'opère avec les boutons d'interaction dont les noms sont explicites : l'utilisateur peut cocher les cases qu'il pense être une bonne réponse, vérifier son choix ou réinitialiser le quiz, et enfin afficher les explications relatives aux propositions valides. Pour le moment, il n'y a pas de compteur de points, ni de bloqueur de visualisation des résultats corrects ; c'est au lecteur de jouer le jeu.

\begin{quizquestion*}<\displ.\>=[\langle pos.\rangle] \langle (\text{orrect}\rangle) \langle (\langle pos.\rangle) = \langle (\text{vernet}\rangle) \langle (\langle pos.\rangle) = \langle (\text{vernet}\rangle) \rangle (\text{vernet}\rangle) \rangle (\text{vernet}\rangle) = \langle (\text{vernet}\rangle) \rangle (\text{vernet}\rangle)

3.3 Options linguistiques

Les conventions de langue varient. Évidemment, les mots qui désignent les points et les intitulés de boutons sont différents d'un langage à l'autre, mais également les séparateurs de décimales des nombres. On peut, là encore, se référer à l'extension assignpoints, mais ici trois options de langue sont également d possibles : anglais (par défaut), français et allemand.

L'option linguistique est assez logiquement activée par le nom de la langue de composition du document :

d. Pour le moment, seul a été testé le système Babel et uniquement pour l'anglais et le français.

```
    _ \usepackage{texjazz-assignpoints} → anglais par défaut;
    _ \usepackage[french]{texjazz-assignpoints} → français;
    _ \usepackage[german]{texjazz-assignpoints} → allemand.
```

3.4 Options additionnelles des environnements

La rédaction d'exercice peut parfois s'avérer fastidieuse, sur le fond comme sur la forme. Aussi, afin de se constituer un vivier de problèmes à résoudre et de questionnaires à choix multiples à remplir ou à partager avec des collègues, il est pratique de les dissocier du document principal en les enregistrant par eux-mêmes dans un répertoire approprié.

```
\begin{exercise}[\langle key\text{-}value\ options \rangle] \begin{quiz}[\langle key\text{-}value\ options \rangle]
```

storing = true|false

Par défaut : true

L'extension askreply inclut l'option storing=true/false qui, par défaut est activée. Deux répertoires sont automatiquement créés : « Exercises-<jobname> » et « Quizzes-<jobname> » pour accueillir d'une part, les exercices et leurs solutions et, d'autre part, les questionnaires à choix multiples.

Les enregistrements comportent deux types de fichiers, ceux intitulés <jobname><environment>-body-<no>.ltx et ceux nommés <jobname>-<environment>-<nb>.env.
Les premiers représentent le code LETEX du corps de l'environnement concerné et les seconds sont constitués de l'ensemble de l'environnement — le corps de l'environnement est inséré dans l'environnement \begin{env}...\end{env} — et sont prêts à être incorporés dans un autre document.

display = true|false

Par défaut : true

Dans la même veine que l'enregistrement, on peut aller piocher dans une collection d'exercices ou de quiz déjà saisis, mais ne pas vouloir immédiatement les dévoiler dans un document. L'option display=true/false est là pour ce faire. Elle permet la saisie d'exercice, quiz ou solution pour préparer un document final en différant leur affichage.

```
title = ⟨optional title⟩
```

(initialement vide)

Par défaut : 6pt

Par défaut : 6pt

Comme précédemment évoqué, les environnements d'exercices et de quiz peuvent comporter un titre de manière optionnelle.

```
before skip = \langle length \rangle
after skip = \langle length \rangle
```

Enfin, deux autres options permettent de contrôler les espaces verticales, juste avant et juste après un environnement d'exercice, de quiz ou de solution, à savoir : before $skip=\langle length\rangle$ et after $skip=\langle length\rangle$. Par souci d'harmonie et de simplicité, les noms des clefs sont repris de la syntaxe de l'extension tcolorbox.

Le traitement des environnements de solution diffère un peu. Les options d'enregistrement (storing) et d'affichage (display) restent identiques, mais bénéficient d'un champ additionnel relatif à son numéro d'identification.

\begin{solution}[$\langle key\text{-}value\ options \rangle$]

 $ID = \langle exercise \ number \rangle$

(initialement vide)

Comme déjà mentionné au §3.1, si il y a une discontinuité entre les énoncés d'exercices et leur solution, il faut indiquer explicitement à quel exercice correspond la solution. Sinon, la numérotation s'incrémente d'une unité par rapport à la dernière solution. C'est aussi le cas après avoir « réinitialisé » les solutions.

5 Historique des versions

2021/01/14 — vo.1g

Updating package and French documentation class (new "known bug" and "version changes" sections with 'xltabular' package).

2021/01/12 — vo.1f

Cleaning up the source code and updating the French documentation (new $T_E X_j$ azz documentation class).

2021/01/08 — vo.1e

Bug layout correction (introducing a test about number of lines in the environment, but space control with empty contents remains buggy) and updating French documentation.

2021/01/02 — vo.1d

Cleaning up the source code and updating French documentation.

2021/01/01 — V0.1C

New French documentation.

2020/12/08 — vo.1b

Cleaning up the source code.

2020/03/20 — vo.1a

First release based on 'tcolorbox' package and PGF/TikZ layers. It has been thought as a companion package to 'assignpoints' package and propose efficient quiz layout by mean of OCG/OCMG.

6 Commentaires circonstanciés (pour mémoire)

In order to solve issues in the writing of this Lagarance Text. Six Website. The different possible approaches and references are given in this section as a reminder.

6.1 Capturing system commands

The aim is to create new directories for storing exercises, solutions and quizzes. To interact with system commands (shell/bash under Unices), one must use the "shell-escape option" for ETEX to be able to create the directories if not already present. For this task, the Enrico Gregorio's proposal is used, see:

```
https://tex.stackexchange.com/questions/16790/[...]
[...]write18-capturing-shell-script-output-as-command-variable/
```

Note that this snippet is taken "as is", because the package author is not yet comfortable with \LaTeX 3 syntax. It is also the case for some other snippets given in the sections below.

With respect to 'ifplatform' package to detect the operating system, the presence of these directories is tested and recorded in a command. According to this variable status, the directories are created or not.

e. The author of this package is a beginner in \LaTeX packages writing and still not aware with all the subtleties of the internals.

```

6.2 Verbatim file/environment with options

After creating directories, it is time to store the exercises/solutions and quizzes. All these files are verbatim copies of each environments (with of course also their "subenvironments"). Because this package store both the Larent cornents (.lxt extension) and each independent files (.env extension), we need to have verbatim copies of the environments. The first one (.ltx) to display the environment in the document, and the second one to store (.env) all environments for futher treament (copying, transfering, etc.).

Based on the 'fancyberb' package two types of files are defined, firstly by mean of a new verbatim environment, and secondly by adding the begining and ending syntax for each environment with the help of the 'catchfile' package. See:

```
https://tex.stackexchange.com/questions/219996/[...]
[...]writing-environments-out-to-files-and-prepending-appending-additional-code
```

The issue here comes from the fact that the tradional way of managing key-value options ('keyval', 'pgfkeys', ect.) with verbatim contents can't be solved without a workaround if one wants to pass optional arguments; optional arguments are considered as verbatim inputs and Łashes. The exercise environment is taken

as an exemple, but in principle, are also applied to quiz and solution. The actual problem and its solution are given by the first link below. For the record, several other links are proposed about the subjet. See:

```
https://tex.stackexchange.com/questions/9035/[...]
        [...]how-to-pass-an-optional-argument-to-an-environment-with-verbatim-content

https://tex.stackexchange.com/questions/486148/[...]
        [...]avoid-passing-an-empty-optional-argument-an-environment-with-verbatim-content

        [...]what-is-the-maximum-limit-of-elements-in-a-list-expl3-xparse

https://tex.stackexchange.com/questions/20957/[...]
        [...]how-to-use-a-write-command-inside-a-newenvironment

https://tex.stackexchange.com/questions/113906/[...]
        [...]format-a-verbatim-paragraph
```

One has to change catcodes at the begining of the environment and paid attention to report the actual begining of the environment after options treatments. See explanations of @T.H and Hendrik Vogt in this link on TeX.SX.

```
\NewDocumentEnvironment{exercise}{ }{% Changing the catcodes to read options (EOL ^M)
  \catcode`\^^M=\active
  \@ifnextchar[%
    {\catcode`\^^M=5 \exercise@start}
    {\catcode`\^^M=5 \exercise@start[]}
}{%
  \endVerbatimOut%
    ...
}
\def\exercise@start[#1]{% Actual beginning of the environment
  \pgfkeys{/askreply/.cd, #1}% Key-value options
    ...
  \def\askreply@outfilename{%
  \exercisesdir\jobname-exercise-body-\askreplytwodigits{\theexercise}.ltx}%
  \VerbatimOut{\askreply@outfilename}%
}
```

6.3 Background TikZ layer through pages

Because nested 'tcolorboxes' are only breakable for the first level, even with the 'enforce breakable' option, one must find a different strategy. The subenvironments like subexercise, subsolution or quizquestion have to be breakable too. Thus the simplest way to achieve this goal is to consider the first level boxes (exercise, solu-

tion and quiz) as a background for the other 'tcolorbox' boxes. This can be done by mean of PGF/TikZ drawing tool and the 'zref' extended system cross-referencing tool (in particular the <code>zref-abspos</code> module/package which gives the absolute coordinates on the page). To solve the issue, the <code>tikzpagenodes</code> package is also of practical use.

The effective way of doing is inspired by a Martin Scharrer's non offical package named 'tikzpagelayer', which is no more available (see source code and the links below):

```
    https://tex.stackexchange.com/questions/377161/[...]
        [...]the-current-state-of-the-art-tikz-underliner/

```

6.4 OCG/OCMG

6.5 Custom tooltips (margin/foreground)

6.6 Known bugs

2021/01/14 — vo.1g	Status	Priority
If there is a page break inside the quizquestion environment, the reset button and its function only reset the second page proposals.	FIX ME	Urgent
2021/01/14 — vo.1g	Status	Priority
An empty first line within an exercise or a solution leads to spurious vertical space (why?); For example beginning by a subexercise or a subsolution. Workaround: adding a short sentence solves	FIX ME	Urgent
the issue, but it is not satisfying.		

7 Implémentation

On one hand, the lines I-69 have been omitted in the following code. They only repeat the license statement which has already been mentioned in section 4. On the over hand, the specific macros belonging to this package are highlighted in blue, both those for the user interface and for internal control sequences. Numbers, options, conditionals, lengths, counters, external package names and commands are left in black. TEX, LTEX or programming packages commands (like 'etoolbox', 'xparse' or PGF/TikZ for graphic tools are in bold purple).
